

An Account from the Formal Semantics on the Change from the Polar-interrogative to the *Wh*-interrogative

GURT 2017 Mar. 11th

Akitaka YAMADA

ay314@georgetown.edu

1 Introduction

Introduction

- **Topic:**
Change in form-meaning mapping
- **Language data:**
Development of interrogative clauses in Japanese
- **Goal:**
Compare the observation in Formal Semantics with the discussion in Diachronic Syntax
 - a. Domino effect
 - b. Parameter (E-language based) vs. I-language driven

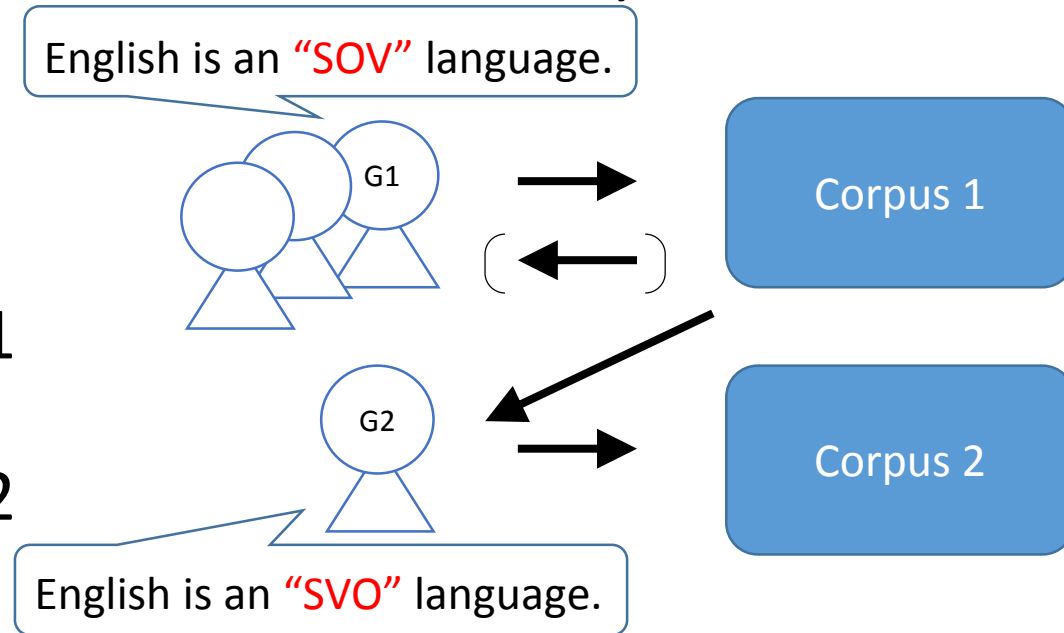

2 Concerns in previous studies

Regress Problem (Roberts 2007)

- Regress Problem

Generation 1: G1 -> Corpus1

Generation 2: G2 -> Corpus2

Diachronic Semantics

1 Contribution from Cognitive/functional researchers

- Subjectification w.r.t. Grammaticalization
- Intersubjectification
- Metaphor
- Metonymy
- Construction Schemata

2 Contribution from Formal Semantics (Eckardt 2006; Deo 2015)

- Role of pragmatics
- Surface-match
- Semantic universal
- communicative characteristics

Two main tasks: Deo (2015)

1 Synchronic aspect (static/structural): Give a *precise* analysis (description) of the data.

2 Diachronic aspect: model the language change

3 Case study: Japanese interrogatives

Language data: interrogatives (21st century)

(1) a. polar (yes/no) interrogatives

John-wa k-imas-u -ka.
 John-TOP come-HON_A-PRS -Q
 'Will John come?'

b. content (wh-) interrogatives

Dare-wa k-imas-u -ka.
 who-TOP come-HON_A-PRS -Q
 'Who will come?'

(2) a. polar (yes/no) interrogatives

John-ga kur-u -ka sir-anai.
 John-NOM come-PRS -Q Know-NEG
 'I do not know whether John will come.'

b. content (wh-) interrogatives

Dare-ga kur-u -ka sir-anai.
 who-NOM come-PRS -Q Know-NEG
 'I do not know who will come.'

Direct interrogatives (11th century)

(1) a. polar (yes/no) interrogatives

John-wa k-imas-u -ka.
John-TOP come-HON_A-PRS -Q
'Will John come?'

~~b. content (wh-) interrogatives~~

~~*Dare-wa k-imas-u -ka.*
who-TOP come-HON_A-PRS -Q
'Who will come?'~~

~~(2) a. polar (yes/no) interrogatives~~

~~*John-ga kur-u -ka sir-anai.*
John-NOM come-PRS -Q Know-NEG
'I do not know whether John will come.'~~

~~b. content (wh-) interrogatives~~

~~*Dare-ga kur-u -ka sir-anai.*
who-NOM come-PRS -Q Know-NEG
'I do not know who will come.'~~

Direct interrogatives (11th century)

(3) *-ka* in the Heian Period

Shoukun: “*Monoketamaharu. Iduku-ni ohasimas-u-zo.*”
hello. where-at be.HON_S-PRS-PRT

Interrogative particle which triggers **Question Move**.

Utsusemi: “*Koko-ni-zo hus-itar-u. [Marouto-wa ne-tamah-inur-u-ka. [...]]*”
Question here-at-FOC lie-PRF-PRS guest-TOP fall_into_sleep-HON_S-PRF-PRS-PRT

Shoukun: “*Hisashi-ni-zo ohotonogomor-inur-u. [...]*”
Reply Hisashi-at-FOC sleep.HON_S-PRF-PRS

‘S: ”Hey, Where are you?’ U: ”It is here that I am lying. Has the guest fallen asleep?’ S: ”He has fallen asleep in the hisashi (place).’ ’ (Hahakigi; Abe et al. 1998: 136)

Direct interrogatives (11th century)

(1) a. polar (yes/no) interrogatives

John-wa k-imas-u -ka.
 John-TOP come-HON_A-PRS -Q
 'Will John come?'

(2) a. polar (yes/no) interrogatives

John-ga kur-u -ka sir-anai.
 John-NOM come-PRS -Q Know-NEG
 'I do not know whether John will come.'

b. content (wh-) interrogatives

~~*Dare-wa k-imas-u -ka.*
 who-TOP come-HON_A-PRS -Q
 'Who will come?'~~

b. content (wh-) interrogatives

~~*Dare-ga kur-u -ka sir-anai.*
 who-NOM come-PRS -Q Know-NEG
 'I do not know who will come.'~~

From direct to indirect interrogatives (14th century)

(1) a. polar (yes/no) interrogatives

S O V	Interrogative Particle
<i>John-wa</i> John-TOP 'Will John come?'	<i>k-imas-u</i> <i>-ka.</i> come-HON _A -PRS -Q 15 th century

(2) a. polar (yes/no) interrogatives

CP	S O V	Interrogative Particle	Embedding Verb
	<i>John-ga</i> John-NOM 'I do not know whether John will come.'	<i>kur-u</i> <i>-ka</i> come-PRS -Q	<i>sir-anai.</i> Know-NEG

(2) Embedded polar interrogatives

The earliest examples in Shiba-shoo all include **NEG** in the main clause. Cf. "uncertainty" expressed by the direct interr. 15th century

This environment serves as a catalyst for the embedded polar interrogative.

(8) [*Kurogane-no kina-mo ar-u-ka*] *iza sir-az-u.*
iron-GEN yellow-also be-PRS-ka at_all know-NEG-PRS
'I do not know whether there is a yellow iron.'

Analysis

(1) a. polar (yes/no) interrogatives

John-wa k-imas-u -ka.
 John-TOP come-HON_A-PRS -Q
 'Will John come?'

(2) a. polar (yes/no) interrogatives

John-ga kur-u -ka sir-anai.
 John-NOM come-PRS -Q Know-NEG
 'I do not know whether John will come.'

(1) Main clause interrogative

$$\llbracket -ka_{11th} \rrbracket^s = \lambda p. \llbracket +update_{inq} \rrbracket^s (\llbracket +int \rrbracket^s (p))$$

$$\left\{ \begin{array}{l} \llbracket +update_{inq} \rrbracket^s \equiv \text{inquisitive update of } c(s) \text{ w.r.t:} \\ \llbracket +int \rrbracket^s = \lambda p \in D_{\langle s,t \rangle}. \exists v \in D_t. \forall w \in \cap m(s). p(w) = v. \\ \text{type-mismatch with content interrs.} \end{array} \right.$$

- 1) Arguments: the context and proposition
- 2) Management of the context

Opacity from
 "Today-or-tomorrow
 -ka-GEN" construction

(2) Embedded polar interrogatives + NEG

$$\llbracket -ka_{14th} \rrbracket^s = \lambda p. \lambda q \in D_{\langle s,t \rangle}. \llbracket +int \rrbracket^s (p)$$

$$= \lambda p \in D_{\langle s,t \rangle}. \lambda q \in D_{\langle s,t \rangle}. \exists v \in D_t. \forall w \in (\cap m(s) \cap q(s)). p(w) = v.$$

- 1) Arguments: the main clause and proposition
- 2) Management of the propositions

Analysis

restriction by the context
uncertainty and the main predicate

$$1 \text{ iff } \exists v \in D_t. \forall w \in (\cap m(s) \cap q_1(s)). p_1(w) = v.$$

$$\lambda q \in D_{\langle s,t \rangle}. \llbracket +\text{int} \rrbracket^s(p_1)$$

John-ga kur-u -ka sir-anai.
 John-NOM come-PRS -Q Know-NEG
 'I do not know whether John will come.'

(2) Embedded polar interrogatives + NEG

$$\begin{aligned} \llbracket -\mathbf{ka}_{14th} \rrbracket^s &= \lambda p. \lambda q \in D_{\langle s,t \rangle}. \llbracket +\text{int} \rrbracket^s(p) \\ &= \lambda p \in D_{\langle s,t \rangle}. \lambda q \in D_{\langle s,t \rangle}. \exists v \in D_t. \\ &\quad \forall w \in (\cap m(s) \cap q(s)). p(w) = v. \end{aligned}$$

- 1) Arguments: the main clause and proposition
- 2) Management of the propositions

From direct to indirect interrogatives (Triggers)

(1) a. polar (yes/no) interrogatives

S O V	Interrogative Particle
<i>John-wa</i> John-TOP 'Will John come?'	<i>k-imas-u</i> <i>-ka.</i> come-HON _A -PRS -Q

11th century

(2) a. polar (yes/no) interrogatives

CP	S O V	Interrogative Particle	Embedding Verb
<i>John-ga</i> John-NOM 'I do not know whether John will come.'	<i>kur-u</i> <i>-ka</i> come-PRS -Q		<i>sir-anai.</i> Know-NEG

(B) Quoted speech: interrogatives in sequence

(4) *Kyoo-ka asu-ka.*
today-PRT tomorrow-PRT
'Is it today (or) is it tomorrow?'

(5) [*Kyoo-ka asu-ka*]-no *kokoti-s-ite*
today-PRT tomorrow-PRT-GEN feeling-do-and
'I had a feeling of "is_it_today_or_is_it_tomorrow" and '

Kinuhata and Iwata (2010)

In 11th century, only a set of fixed expressions can appear in the genitive construction:

- (6) a. "today or tomorrow"
- b. "dream or real"
- c. "be or not be"

Increase of the **opacity** in the Corpus.

From direct to indirect interrogatives (Triggers)

(1) a. polar (yes/no) interrogatives

S O V	Interrogative Particle	
<i>John-wa</i> John-TOP 'Will John come?'	<i>k-imas-u</i> come-HON _A -PRS	<i>-ka.</i> -Q

(2) a. polar (yes/no) interrogatives

CP	S O V	Interrogative Particle	Embedding Verb
	<i>John-ga</i> John-NOM 'I do not know whether John will come.'	<i>kur-u</i> come-PRS -Q	<i>-ka</i> <i>sir-anai.</i> Know-NEG

First change: generalization through bleaching

(1) Change:

Direct polar interrogatives to indirect polar interrogatives

(2) Trigger (> domino effect):

opacity caused by the “is-it-today-is-it-tomorrow” construction

(3) Nature of the change:

- generalization through bleaching (cf. generalization ; Deo 2015)

- the inquisitive updating function is **detached** from the morpheme.

From direct to indirect interrogatives (14th century)

(1) a. polar (yes/no) interrogatives

John-wa k-imas-u -ka.
 John-TOP come-HON_A-PRS -Q
 'Will John come?'

(2) a. polar (yes/no) interrogatives

John-ga kur-u -ka sir-anai.
 John-NOM come-PRS -Q Know-NEG
 'I do not know whether John will come.'

b. content (wh-) interrogatives

~~*Dare-wa k-imas-u -ka.*
 who-TOP come-HON_A-PRS -Q
 'Who will come?'~~

b. content (wh-) interrogatives

~~*Dare-ga kur-u -ka sir-anai.*
 who-NOM come-PRS -Q Know-NEG
 'I do not know who will come.'~~

From polar to content interrogatives (17th century)

(1) a. polar (yes/no) interrogatives

John-wa k-imas-u -ka.
 John-TOP come-HON_A-PRS -Q
 'Will John come?'

b. content (wh-) interrogatives

~~*Dare-wa k-imas-u -ka.*
 who-TOP come-HON_A-PRS -Q
 'Who will come?'~~

(2) a. polar (yes/no) interrogatives

John-ga kur-u -ka sir-anai.
 John-NOM come-PRS -Q Know-NEG
 'I do not know whether John will come.'

b. content (wh-) interrogatives

Dare-ga kur-u -ka sir-anai.
 who-NOM come-PRS -Q Know-NEG
 'I do not know who will come.'

From polar to content interrogatives (17th century)

(3) Disjunct: trigger

The particle *-ka* was reanalyzed as a **disjunct** marker.
-ka could not productively connect DPs in 11th century.

17th century: DP's and other categories are combined.
 (not only TP's), combining **multiple elements**.

Reanalysis:

The central role of *-ka* is to make a set of multiple elements
 (in the case of interrogatives, it is a set of propositions).

17th century

(2) a. polar (yes/no) interrogatives

John-ga kur-u -ka sir-anai.
 John-NOM come-PRS -Q Know-NEG
 'I do not know whether John will come.'

b. content (wh-) interrogatives

Dare-ga kur-u -ka sir-anai.
 who-NOM come-PRS -Q Know-NEG
 'I do not know who will come.'

Analysis

14th century

$$\llbracket -ka_{14th} \rrbracket^s = \lambda p \in D_{\langle s,t \rangle} . \lambda q \in D_{\langle s,t \rangle} . \llbracket +int \rrbracket^s(p)$$

Multiplicity of the propositions

17th century

$$\llbracket \phi \rrbracket^s = \lambda P \in D_{\langle st,t \rangle} . \forall p \in P . \lambda q . \llbracket +int \rrbracket^s(p)$$

$$\llbracket -ka_{17th} \rrbracket^s = \begin{cases} \lambda p . \lambda Q . Q \cup \{p\}, & \text{iff it is not the first conjunct} \\ \lambda p . \{p\}, & \text{otherwise} \end{cases}$$

Restriction on the p (a set of worlds) disappeared.

People in later generation started analyzing the denotation-assignment in a different way.

Quantification part

Set creation part

(2) a. polar (yes/no) interrogatives

b. content (wh-) interrogatives

John-ga kur-u -ka sir-anai.
 John-NOM come-PRS -Q Know-NEG
 'I do not know whether John will come.'

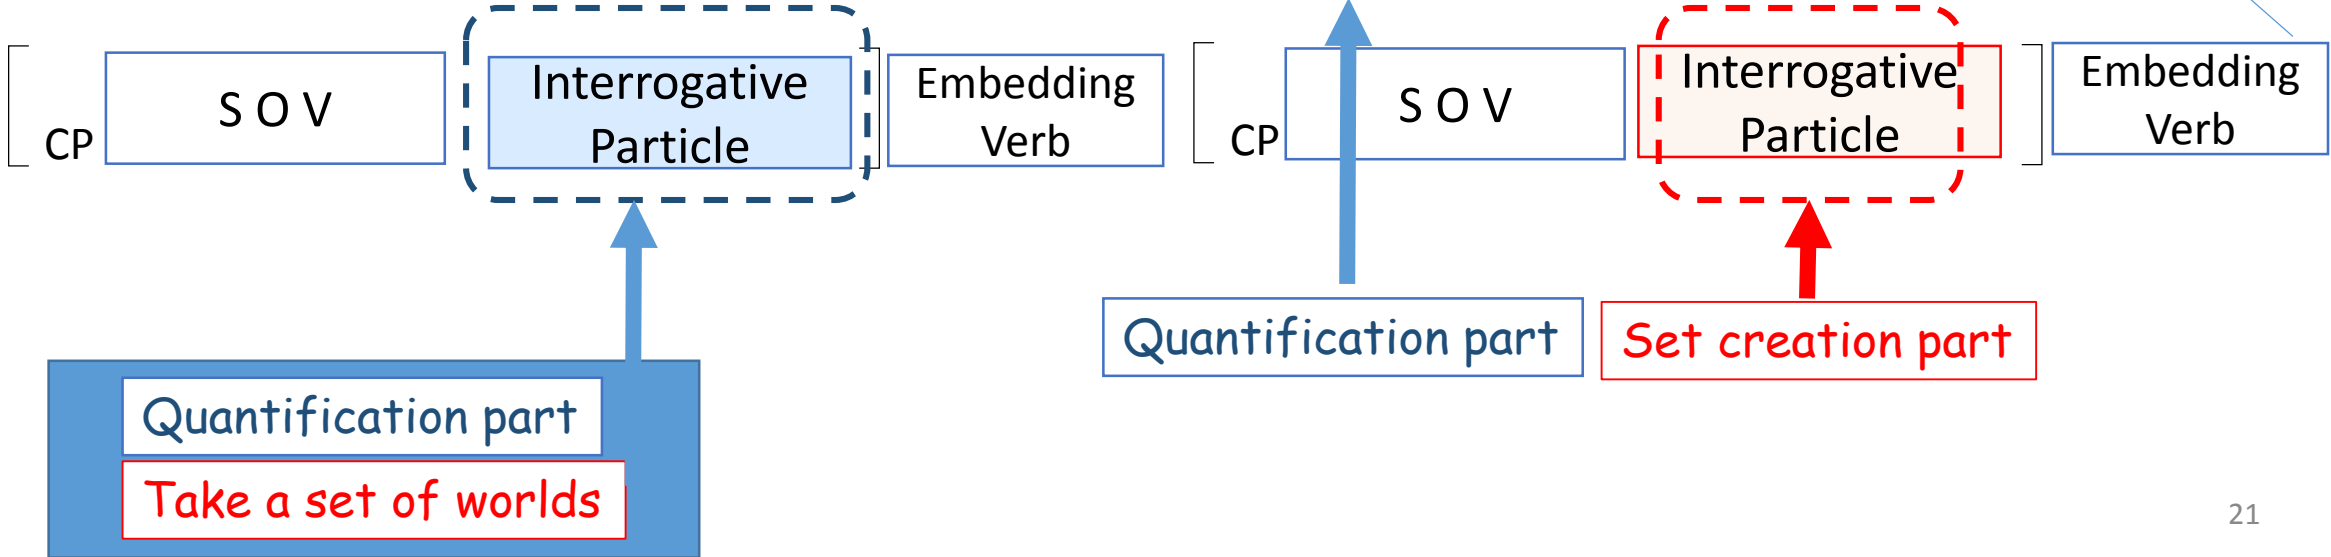

Dare-ga kur-u -ka sir-anai.
 who-NOM come-PRS -Q Know-NEG
 'I do not know who will come.'

From polar to content interrogatives (17th century)

14th century

17th century

Second change: preference for compositionality
 (1) Change:
 From polar interrogatives to content interrogatives
 (2) Trigger (> domino effect):
 Development of the disjunct use
 (3) Nature of the change
 'Re'-distribution (across generations) of the semantic feature (preference for compositionality)

4 Discussion

What are the nature of these changes?

- Contribution from Cognitive/functional researchers
 - *Subjectification w.r.t. Grammaticalization
 - *Intersubjectification
 - *Metaphor
 - *Metonymy
 - Schema-building

What is this?

First change: generalization through bleaching

(1) Change:

from direct interrogatives to indirect polar interrogatives

(2) Trigger (> domino effect):

opacity caused by the “is-it-today-is-it-tomorrow” construction

(3) Nature of the change:

generalization through bleaching (cf. generalization ; Deo 2015)

The inquisitive updating function is **detached** from the morpheme.

Second change: preference for compositionality

(1) Change:

From polar interrogatives to content interrogatives

(2) Trigger (> domino effect):

Development of the disjunct use

(3) Nature of the change

‘Re’-distribution (across generations) of the semantic feature (preference for compositionality)

“Reanalysis is driven by hearers (language learners) who attempt to assign meanings to linguistic expressions that can allow the whole meaning of the complex expression to be derived compositionally (Deo 2015: 185-186).” (cf. Eckardt 2006)

Discussion

Common to those changes:

Just an assignment of denotation to each morpheme.

Comparison with studies in diachronic syntax

- I-language based approaches
 - Cue: predetermined menu
 - Discovery: find a structure allowed by the derivation in meaning. (cf. Lightfoot 2016)
- E-language based approaches
 - No global evaluation of grammars
 - “parameters”? (apocryphal)

Parameter?

- These changes are **construction-specific changes**.
- It is adhoc to “coin” such a parameter as:
Can this language use content-interrogative in the embedded environment? Y/N
- The change is, rather, considered to be an *abduction* from a proposition to a singleton set of propositions (*cf.* the alternative/partition semantics, Hamblin 1973; Groenendijk and Stokhof 1984), because of the strong ambiguity of polar interrogatives (Roberts 2007:133).
- This fits well with the recent view of Lightfoot (2016) in that a change is hypothesized to appear in a new generation when **they discover/accept a pattern as long as the pattern is coherent to the language system that they have**.
- The study suggests that the basic syntactic/semantic learning mechanism/changes are driven by similar principles.-
